(scara 1:50)

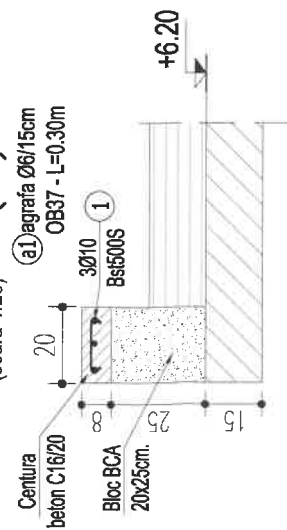

- se vor decoperta straturile de hidroizolatii si termoizolatii de la nivelul terasei existente;
- se vor desface atelele perimetrale prin taierea acestora cu discuri diamantate. **Se accepta** utilizarea de masini rotopercutante doar pe zonele unde spatiul nu permite utilizarea discurilor pentru taiere.
- Desfacerea se va realiza pe tronsoane, bucatile desfacute urmand a fi evacuate prin intermediul unei macarale de plansu sau a unui tobogan pentru evacuare molarie. **Atentie! Interventiile se vor face fara a induce socuri puternice in elementele structurale existente. Desfacerile se vor executa ingrijit, sub supravegherea unui cadru de specialitate al firmei executante, cu scule si dispozitive adecvate. Pe durata executiei lucrarilor de interventie vor fi realizate sprijiniri provizorii la nivelul elementelor. Nu se accepta demolarea elementelor din beton peste placi, sau pardoseli existente sau prabusirea acestora de la inaltime!;**
- fețele tăiate se vor finisa cu mortar de ciment (fara var!) pentru a proteja barele de armatura tăiate.
